UX Report
Card component

Here are some usability issues I noted about the card component. Most have been fixed in the improved design version.

- The component isn't pixel perfect, due to some edges/borders that stick out here and there (eg. On the top of the list in the tab 1, on the right side of the card…).

- The component layout isn't optimal for each screen size, even if we have the main two (one desktop version, one mobile version).

- The height of the card is changing from tab to tab. It would be better if it stays the same no matter the tab selected.

- There is no visual indication about the list element selected. It would be good that the one selected have a different style. The same remark can be made for the :hover effect, both on the tab and the list elements.

- The color of the Pic-2 is unpleasant and agressive to the eyes.

- The change of alignement between the Tab 1 and Tab 3 is a bit odd.

- In the Tab 2, I have a bug on the loading item, but I can't understand why. It's fixed in the updated version by using the default bootstrap spinner.

- It's quite subjective, but the square edged borders are a bit rough. It would nicer (softer) visually to have rounded borders, as on the default bootstrap theme.
